

# Turf Pro Formula for Hydroseeding

## Better and Proven Results The Easy Way!

REV Turf Pro Formula is designed to help increase the fertility efficiency and improve vitality of soils during critical stages of plant development.

REV Turf Pro Formula addresses specific soil conditions to enhance:

- ◆ Soil structure
- ◆ Increase soil moisture infiltration and retention
- ◆ Improve nutrient uptake by plants
- ◆ Stimulate germination and growth
- ◆ Help achieve denser vegetative cover **FAST!**

## Providing MAXIMUM Erosion Control!

The faster you establish vegetation, the sooner you can **GET PAID** and go away proud from your erosion control projects.

REV Turf Pro Formula has **natural occurring** soil buffering capabilities to help improve both high and lower pH soils. These organic properties promote rapid seed germination and long-term vegetation establishment.

Use REV Turf Pro Formula and buffer soil pH to drastically increase the **organic sustainable growth** on your next project.

- ◆ Quickly neutralize acidic and alkaline soils, promoting more complete germination and improving nutrient uptake.
- ◆ Make nutrients such as nitrogen, phosphorus, potassium, calcium, iron, zinc and others more readily available in the soil for plant uptake and conversion.
- ◆ Loosen soils to improve water infiltration and to promote more robust root development.
- ◆ Facilitate more complete nutrient utilization to minimize leaching or runoff into streams, rivers, lakes bays and groundwater.

## Easy to Use

REV is a concentrate for less packaging and handling issues. Liquid based product for easy tank mixing. Natural and safe for all.

**Grow Denser Vegetation, Faster**  
Use **DAKOTA REV Turf Pro Formula**
